- ROS topic design

Hardware nodes

- sensor node
- si node

1. Development Guide

1.1. Prerequisite

- Basic knowlegde of NodeJs, Git and ROS
- Install Git & Editor
  https://code.visualstudio.com/
- Install NodeJS
  https://nodejs.org/en/download/
- Install Sails

```
npm install sails -g
```

- If on Windows:
  1. Install Ubuntu
     - Got to Microsoft store
     - Search for 'Ubuntu'
     - Click get/install
  2. Install ROS
     - Follow ROS Kinetic installation + (this might take some time) http://wiki.ros.org/kinetic/Installation/Ubuntu

       ```
       sudo apt-get install ros-kinetic-desktop-full
       ```

     - And enviroment setup

       ```
       echo "source /opt/ros/kinetic/setup.bash" >> ~/.bashrc
       source ~/.bashrc
       ```

     - Test the installation running ROS

       ```
       roscore
       ```

     - Done for now

       ```
       (ctrl+c)
       ```

1.2. Github

- Invite your personal Github account to acces Windesheim-Willy repos https://github.com/orgs/Windesheim-Willy/people
- Clone Git Repo

```
git clone https://github.com/Windesheim-Willy/repo-name
```

- Switch to test branch

```
git checkout -b origin/test
```

1.3. Compilation

Compilation is done via catkin, this is done to create a rospackage so that nodejs can run in a ROS enviroment.

```
cd WWEB/src
npm install
cd ..
source /opt/ros/kinetic/setup.bash
catkin_make
```

1.4. Testing/Debugging

Run without ros:

```
cd WWEB/src
sails lift (or node app.js)
```

Run with Ros:

1. Start Roscore
    - Open a terminal (Ubuntu app on windows) -

    ```
    cd WWEB
    source devel/setup.bash
    roscore
    ```

2. Run webplatform
    - Open a terminal (Ubuntu app on windows) -

    ```
    cd WWEB
    source devel/setup.bash
    rosrun willyweb start.sh
    ```

The rosrun command might not have acces to port 80 for this to work use sudo -s

```
sudo -s
rosrun willyweb start.sh
```

1.5. Running Scripts

In the same manner as you would do Testing/Debugging you can also run scripts. Scripts are located in the folder 'WWEB/src/scripts'.

1. Start Roscore
    - Open a terminal (Ubuntu app on windows) -

```
cd WWEB
source devel/setup.bash
roscore
```

2. Run sending script
    - Open a terminal (Ubuntu app on windows) -

```
cd WWEB
source devel/setup.bash
rosrun willyweb scripts/send.js
```

3. Run receive script
    - Open a terminal (Ubuntu app on windows) -

```
cd WWEB
source devel/setup.bash
rosrun willyweb scripts/receive.js
```

Rosrun makes it possible to communicate with ROS because it is now run as a ROS package

The 'start.sh' script consist out of a simple run script which launches the webplatform

```
#!/usr/bin/env bash
node src/app.js
```
